About PYC

From Australia and China

The PYC family is made up of two entrepreneurs (Julia & Mike), Julia comes from China, Mike comes from Australia. They want to make a real difference for the planet together. Everyone knows that plastic causes devastation to the environment — especially for marine life! The Internet and social media are full of heartbreaking photos that show the terrible effects that plastics have on nature. But what can we actually do to change things? This is where the idea came about.

Our history

1998 set up first owned factory in China to make recycled printing packaging.

2000 set up second owned factory in China to make reusable bags.

2013 started our cooperation with Alibaba group and involved in exporting business.

2016 set up Xiamen branch, mainly focus on research of eco-friendly products.

2020 registered as PYC Australia in Melbourne to provide better service for AU market.

Planting Trees

When you purchase PYC eco friendly products, you are helping Compensation CO2 plant trees. For us, reducing our carbon footprint and benefitting the health of our beautiful planet is crucial. Since the beginning of this venture, over 20,000 trees have been planted in China and Australia, — thanks to you!

Our commitment

We are committed to use sustainable materials and manufacturing practices, customizing wide range of biodegradable products, providing high-quality packaging also recycled /compostable idea for promotional for small business owners, entrepreneurs, start-ups, marketers and more.

We like to look at the overall impact of the products we are manufacturing, you can follow our FB, till now we started providing over 1000 brands on non-plastic packaging, green promotional gift for boosting their brands. We also view success as helping our brands take steps to reduce their waste. We need you all in this journey and make us success.

Donations

Since PYC beginnings, we have made numerous donations to various organizations for fundraising events or volunteer tourism. Notably, we donated 15,000 cotton bags to non-profit organization in AU and China, and 30,000 PLA doggy bag and 4,000 refillable bottle for low-income families.

Together, for an eco-friendly lifestyle!

PYC australia, it's more than a brand, it's a lifestyle. Let's reduce our environmental footprint together by eliminating plastic waste and planting trees!

Becoming eco-responsible takes a few simple steps and that's what we propose. Join PYC journey!

Why we choose kraft paper ?

Kraft paper, the most powerful paper, is now mainly made of wood fiber and made through chemical methods. The wood pulp content in brown paper is almost 100%. Kraft paper is a paper or cardboard made of chemical pulp produced in the kraft paper process. Kraft paper process or sulfate sizing process is a process used in the production of pulp, in a large pressure vessel known as the boiler, using sodium hydroxide and sodium sulfide to separate the lignin from the crushed wood pieces, so as to obtain the pulp with cellulose as the main component.

Similarities exist between biodegradable and compostable materials. They can all be decomposed by microorganisms; however, as the compost material rots, they compost and fertilize the soil, unlike the decompose and break down biodegradable materials. Not all biodegradable materials are compostable, but all compostable materials are biodegradable. Kraft paper is compostable. Kraft paper can safely compost, and by enriching it also has a positive impact on compost stacks.

Environment - Friendly

Nowadays, many people are more concerned about the environment than ever before, and are very concerned about the environmental conditions. Kraft paper has become one of the most commonly used paper forms. You can see brown paper almost everywhere in the store, at home, at school.

The manufacturing process of kraft paper makes it environmentally friendly. The process is much simpler, and very few chemicals are used in the process. This makes kraft paper completely environmentally friendly and environmentally friendly. Chemicals used to manufacture kraft paper can be recycled, reused and recycled. Pine and bamboo are the most common wood options for making kraft paper. Both woods are completely organic and require no chemicals during processing. Therefore, when you process kraft paper, it is not harmful to the environment; instead, it composts and fertilize the surrounding environment.

Kraft paper is a better alternative to plastic. Kraft paper bags will not cause any damage to the environment like plastic paper bags. Kraft paper is a very wide range of used paper. We find that they can be used for different purposes, and fortunately, they are environmentally friendly and have no negative impact on the environment. Although we used this project for different purposes, we also reduced the impact on the environment.

We must all strive to express our concern about the state of the environment. This is where we live, and we cannot manage it carelessly. In order for us to enjoy our life on this planet, we must take care of it.
